MINSTER TRY-OUT PRESSES

- POWER** A prime factor in successful die try-out, while the lack of it limits your operations. There's power to spare in a "Minster."
- PRECISION . . .** Accurate slide to bolster parallelism you can count on. Press precision to match your tool room precision saves unnecessary try-out time and wasteful changes. Don't let a press that isn't built for precision reject good dies.
- CONTROL . . .** Fast, sensitive control of press needed for try-out work. It's there with Minster's patented electrical controls and Combination Air Friction Clutch and Brake Unit.
